As part of the qulu client software and sharing the same great user experience, the qulu Video Wall feature lets operators remotely control single or multiple monitor installations via one or many clients in real-time. With the ability to push individual video streams, layouts, or operators screens to any monitor the qulu video wall feature helps increase situational awareness for your organisation.

The simple but scalable Video Wall licensing caters for every size of video wall or remote monitor configuration. Administrator's can activate new or add additional Video Wall's quickly by adding a license code to the qulu system.

ORDERING INFORMATION:

0480910   Video Wall License 1 User / 2 Monitors

KEY FEATURES:

Remote Monitor Control
Send single video streams, entire layouts and even server performance information quickly and easily to single or multiple monitors.

Improved Situational Awareness
When dealing with a situation the operator's local screens can be pushed to the video wall ensuring complete situational awareness.

Standard PC hardware
No specialist hardware required, Video Wall runs on standard PC hardware running Windows 7 / 8.1 pro or Ubuntu Linux.*

Scalable
Each video wall enabled PC can support up to 4 monitors, multiple PC's can be connected to the network providing a simple scalable solution.

*Dedicated Nvidia / ATI video graphics cards recommended.
